

Portfolio

of Kiril Popov
an undergraduate in 12th grade

This is me – Kiril Popov, 18

This portfolio contains the projects done during Graphic design class in my Software and Hardware specialization in school and project pertaining to my hobby and interest in 3D Design and 3D Printing.

I have an interest in electronic and robotics and wish to be an electric engineer.

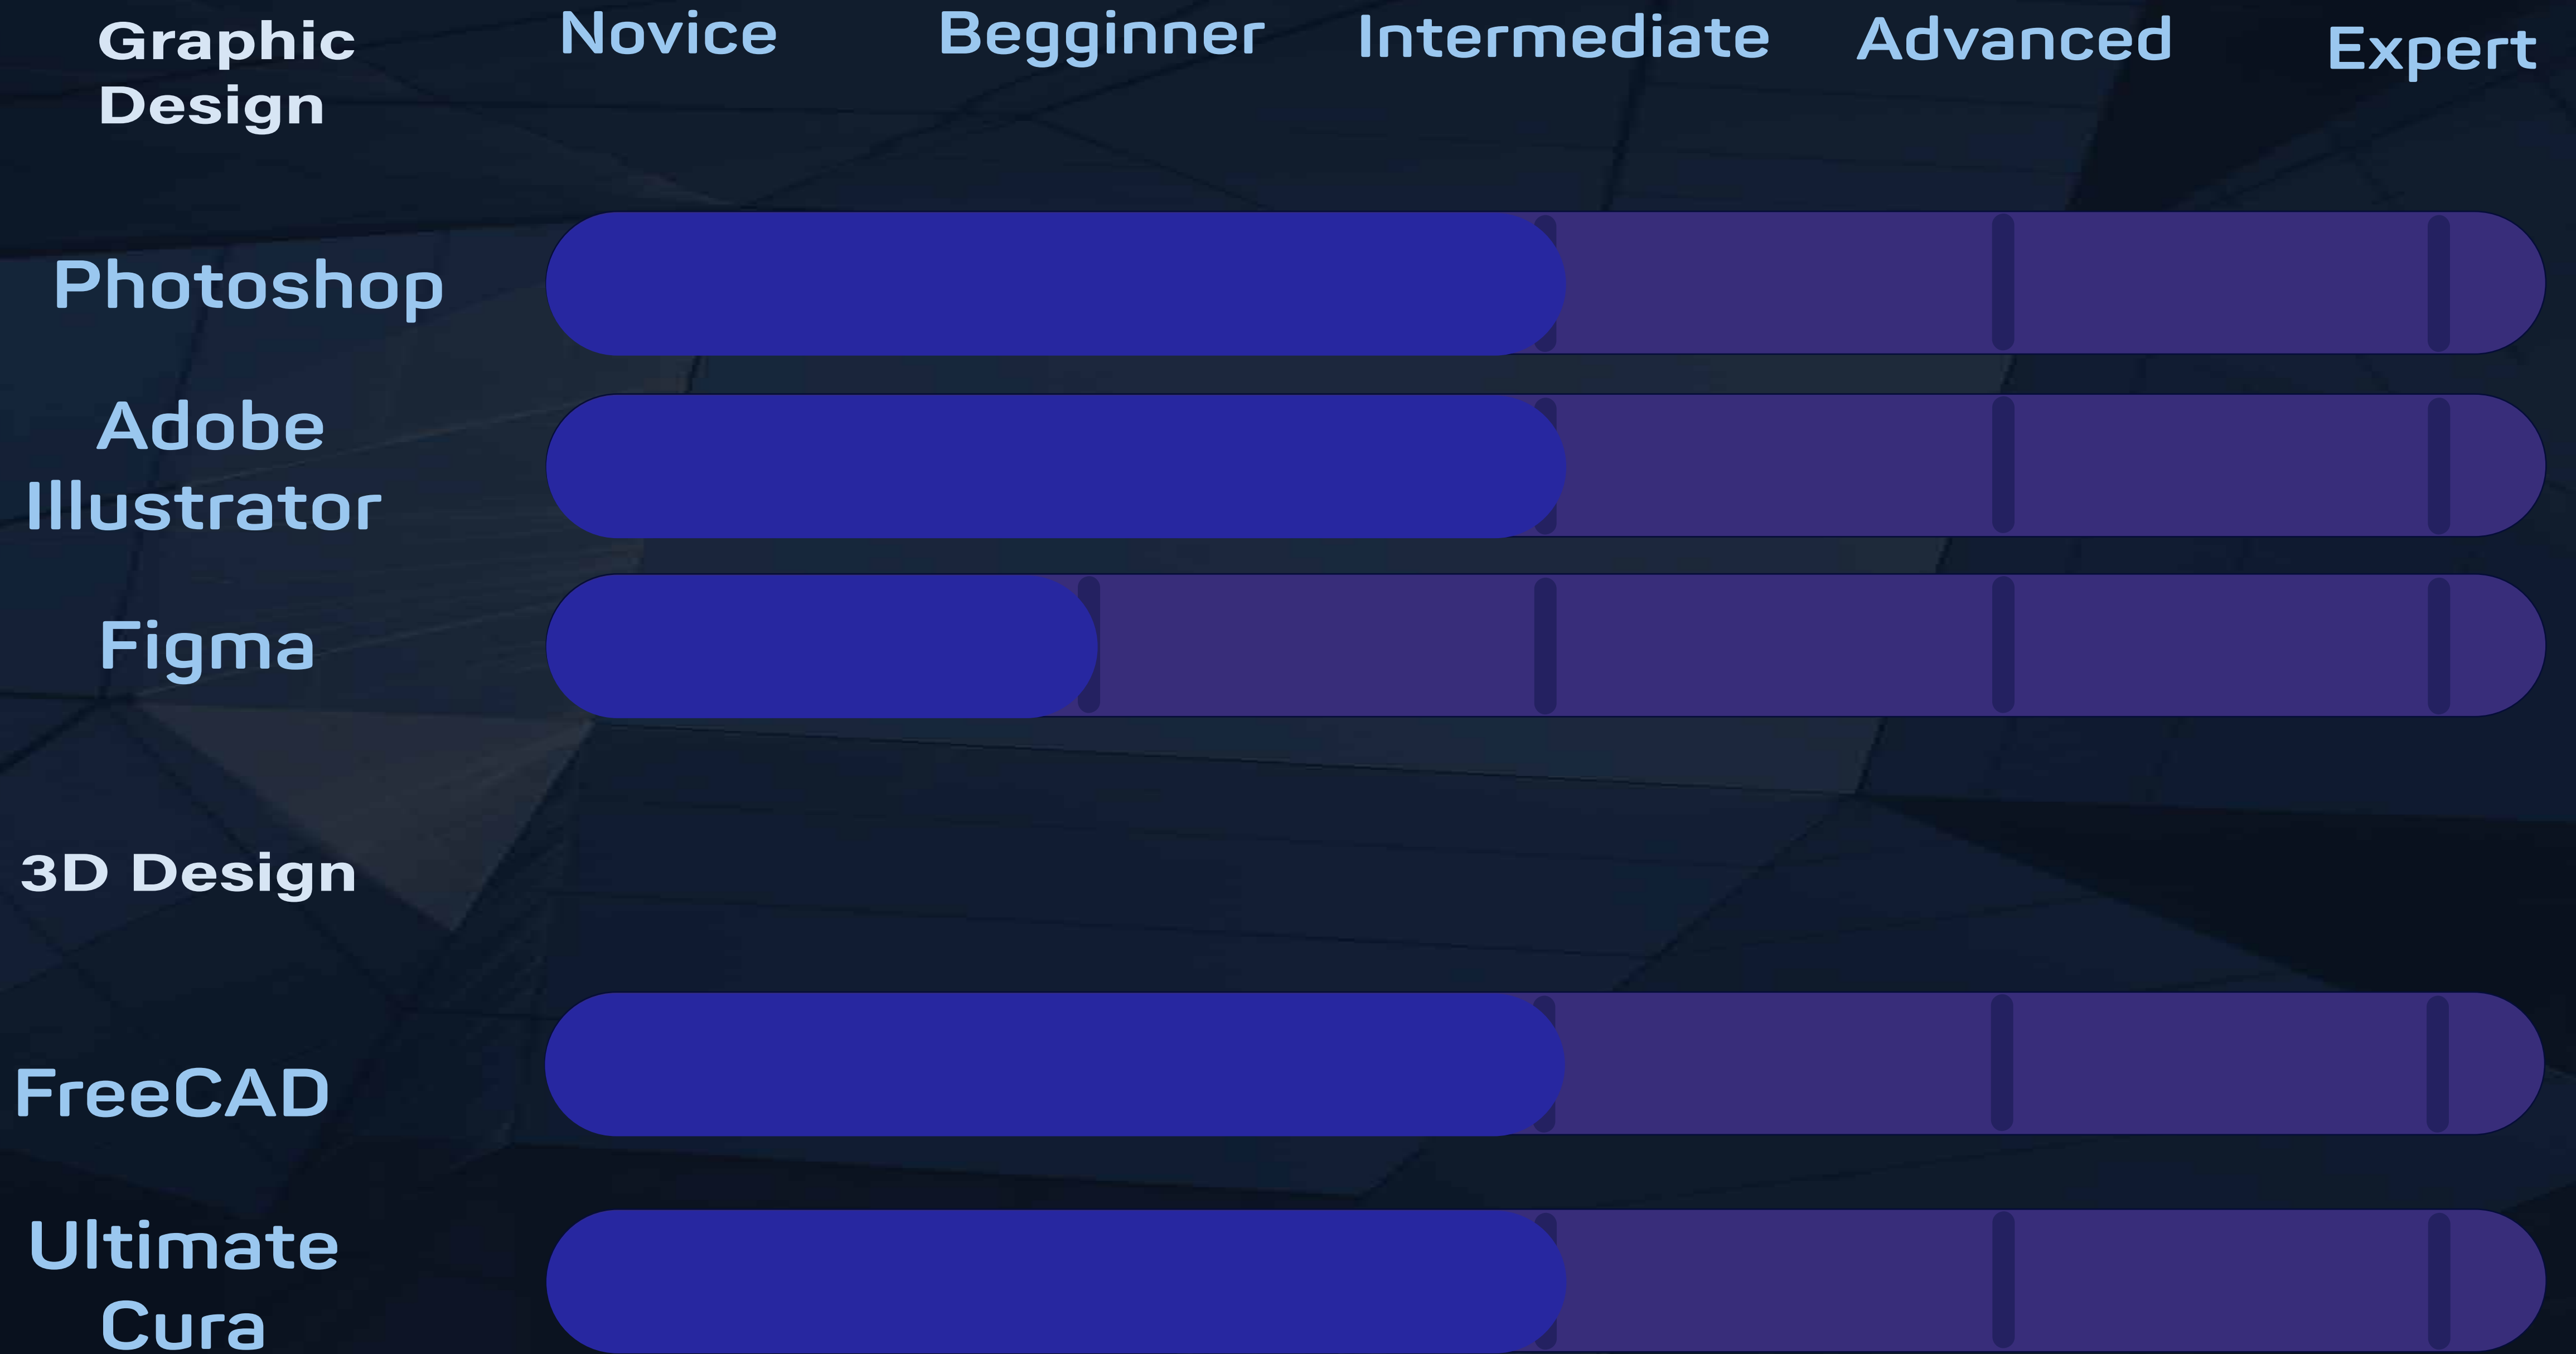

Thus, I have worked on several projects on Arduino and ESP32 during my high school years

It is my wish to pursue engineering and to continue to grow myself in the field of robotics after High school, which I believe this portfolio can attest to.

Content:

- Skill and proficiencies
- Graphic design project
 - Earlier projects in photoshop 
 - Earlier projects in illustrator 
 - Designs done for the  project
 - 3D designs made by me

Vet business card

*Comission by the business class for
3D-modelling and printing of pieces for
a board game*

This is “Delizie”, an imaginary pastry a cake shop.

I was given the task to make a total graphic design on a imaginary business and present in at the end of the first term. On the other pages you can find some of the designs done.

I began with making the plan and the general style of the company, made its loge, the began making the business card and letterhead and folder, after which I began making the design of all different advertisment and other designs(daily menu, clock, uniform)
